# UM670A-03

Automotive-Grade Multi-Constellation
Dual-Frequency GNSS Navigation and
Positioning Module

## **Revision History**

Version	Revision History	Date
R1.0	First release	Dec. 2023
	Updated the V_BCKP voltage to 2.0 V $\sim$ 3.6 V	
R1.1	Added Figure 5-3 UM670A-03 Reel Package Diagram	Nov. 2024
	Added requirements for the RSV pins	
	Updated 3.5 Recommended Footprint on the PCB.	
R1.2	Updated <b>4.3 Stencil</b> .	Mar. 2025
	Updated Figure 3-1 UM670A-03 Recommended Minimal	WIGH. 2020
	<b>Design</b> and added C4 in the remarks.

## 1 Introduction

UM670A-03 is an automotive-grade GNSS navigation and positioning module designed for intelligent driving field. It is based on the multi-system, dual-frequency and high-performance GNSS SoC - UC6580A, which conforms to the requirements of AEC-Q100, and the manufacturing process is in line with IATF 16949.

UM670A-03 supports GPS/BDS/GLONASS\*/Galileo/QZSS/NavIC\* and L1 + L5 frequencies, having the functions of raw data output and single point positioning. See Table 1-1 for the detailed specifications.

### 1.2 Block Diagram

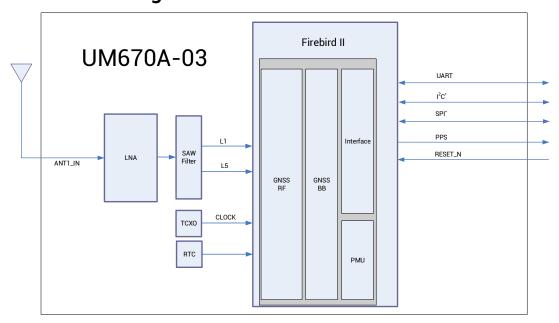

Figure 1-2 UM670A-03 Block Diagram

#### 1. RF Part

The receiver gets filtered and enhanced GNSS signals from the antenna via a coaxial cable. The RF part converts the RF input signals into the IF signals, and converts IF analog signals into digital signals required for UFirebirdII chip.

#### 2. UFirebirdII SoC (UC6580A)

UFirebirdII is the new generation RF-baseband and high-precision algorithm integrated SoC developed by Unicore. It adopts 22 nm technology and low power consumption design, supporting multi-path mitigation, anti-jamming and high precision GNSS joint positioning. The chip is especially suitable for the application scenarios which are sensitive to power and size.

#### 3. Interfaces

UM670A-03 has interfaces such as UART, I<sup>2</sup>C\*, SPI\*, PPS and RESET\_N.

The UART supports data transmission and firmware upgrade, and the I/O signal type is LVTTL. The baud rate can be configured by users.

<sup>\*</sup> I2C and SPI are reserved interfaces

## 2 Technical Specifications

### 2.1 Pin Definition

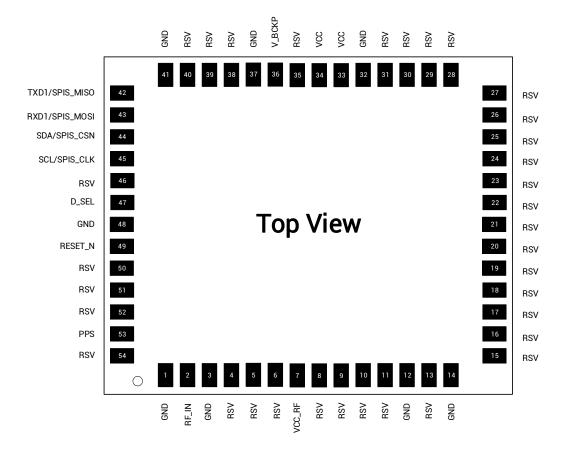

Figure 2-1 UM670A-03 Pin Definition

Table 2-1 Pin Definition

No.	Pin	I/O	Description
1	GND	_	Ground
2	RF_IN	I	GNSS antenna signal input
3	GND	_	Ground
4	RSV	_	Reserved; leave floating
5	RSV	_	Reserved; leave floating
6	RSV	_	Reserved; leave floating
7	VCC_RF <sup>2</sup>	0	Antenna feed output
8	RSV	_	Reserved; leave floating
9	RSV	_	Reserved; leave floating
			·

<sup>&</sup>lt;sup>2</sup> Not recommended to use VCC\_RF to feed the antenna (VCC\_RF is not optimized for the anti-lightning strike and anti-surge due to the compact size of the module).

No.	Pin	I/O	Description
10	RSV	_	Reserved; leave floating
11	RSV	_	Reserved; leave floating
12	GND	_	Ground
13	RSV	_	Reserved; leave floating
14	GND	_	Ground
15	RSV	_	Reserved; leave floating
16	RSV	_	Reserved; leave floating
17	RSV	_	Reserved; leave floating

22	RSV	_	Reserved; leave floating
23	RSV	_	Reserved; leave floating
24	RSV	_	Reserved; leave floating
25	RSV	_	Reserved; leave floating
26	RSV	_	Reserved; leave floating
27	RSV	_	Reserved; leave floating
28	RSV	_	Reserved; leave floating
29	RSV	_	Reserved; leave floating
30	RSV	_	Reserved; leave floating
31	RSV	_	Reserved; leave floating
32	GND	_	Ground
33	VCC	1	Power supply (+3.3 V)
34	VCC	I	Power supply (+3.3 V)
35	RSV	_	Reserved; leave floating
36	V_BCKP	I	When the main power supply VCC is cut off, V_BCKP supplies power to RTC and relevant register. Supply voltage: 2.0 V to 3.6 V, and the working current is less than 10 µA at 25 °C. If you do not use the hot start function, connect V_BCKP to VCC or a standalone power source. Do NOT connect it to ground or leave it floating.

No.	Pin	I/O	Description		
37	GND	_	Ground		
38	RSV	_	Reserved; leave floating		
39	RSV	_	Reserved; leave floating		
40	RSV	_	Reserved; leave floating		
41	GND	_	Ground		
			UART1 output (D_SEL=VCC or floating);		
42	TXD1/SPIS_MISO	0	Master In/Slave Out of SPI slave (D_SEL=GND)		
			UART1 input (D_SEL=VCC or floating);		
43	RXD1/SPIS_MOSI	I	Master Out/Slave In of SPI slave (D_SEL=GND)		
4.4	CDA/CDIC CCN		I <sup>2</sup> C data (D_SEL=VCC or floating);		
44	SDA/SPIS_CSN	_	SPI slave chip select (D_SEL=GND)		
45	eci /edie ci /	_	I <sup>2</sup> C clock (D_SEL=VCC or floating);		
45	SCL/SPIS_CLK		SPI slave clock (D_SEL=GND)		
46	RSV	_	Reserved; leave floating		
			Interface select pin;		
47	D_SEL	I	Use pin 42 to 45 as an SPI slave when D_SEL = GND, as UART1 and I <sup>2</sup> C When D_SEL=VCC or floating		
48	GND	_	Ground		
40	DECET N	I	System reset; active low;		
49	RESET_N		the active time should be no less than 5 ms		
50	RSV	_	Reserved; leave floating		
51	RSV	_	Reserved; leave floating		
52	RSV	_	Reserved; leave floating		
53	PPS	0	Pulse per second with adjustable pulse width and polarity		
54	RSV	_	Reserved; leave floating

<sup>&</sup>lt;sup>3</sup> Since the product has capacitors inside, inrush current occurs during power-on. You should evaluate in the actual environment in order to check the effect of the supply voltage drop caused by inrush current in the system.

This reference value is got from the samples after cold start, and the actual value can vary depending on the factors including firmware version, external circuit, number of the satellites tracked, signal strength, type and time of start, duration, and conditions of test.

### 2.3 Dimensions

Table 2-4 Dimensions

Symbol	Min. (mm)	Typ. (mm)	Max. (mm)

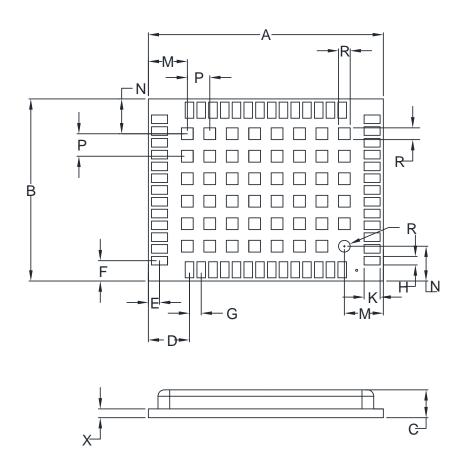

Figure 2-2 UM670A-03 Mechanical Dimensions

## 3 Hardware Design

### 3.1 Recommended Minimal Design

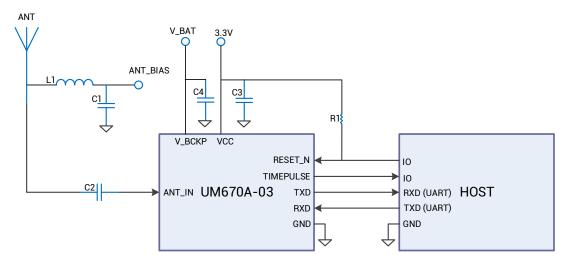

Figure 3-1 UM670A-03 Recommended Minimal Design

#### Remarks:

- L1: 68 nH RF inductor in 0603 package is recommended
- C1: 100 nF + 100 pF capacitors connected in parallel is recommended
- C2: 100 pF capacitor is recommended
- C3: Several 10 µF + 100 nF capacitors connected in parallel is recommended
- C4: 100 nF capacitor is recommended
- R1: 10 kΩ resistor is recommended

### 3.2 Antenna Feed Design

UM670A-03 just supports feeding the antennal from the outside of the module rather than the inside. It is recommended to use devices with high power and that can withstand high voltage. Gas discharge tube, varistor, TVS tube and other high-power protective devices may also be used in the power supply circuit to further protect the module from lighting strike and surge.

If the antenna feed supply ANT\_BIAS and the module's main supply VCC use the same power rail, the ESD, surge and overvoltage from the antenna will have an effect on VCC, which may cause damage to the module. Therefore, it is recommended to design an independent power rail for the ANT\_BIAS to reduce the possibility of module damage.

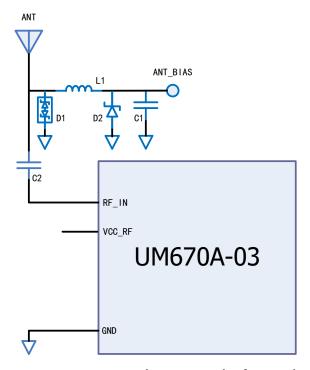

Figure 3-2 UM670A-03 External Antenna Feed Reference Circuit

#### Remarks:

- L1: feed inductor, 68 nH RF inductor in 0603 package is recommended;
- C1: decoupling capacitor, it is recommended to connect two capacitors of 100 nF/100 pF in parallel;
- C2: DC blocking capacitor, recommended 100 pF capacitor;
- Not recommended to take VCC\_RF as ANT\_BIAS to feed the antenna (VCC\_RF is not optimized for the anti-lightning strike and anti-surge due to the compact size of the module)
- D1: ESD diode, choose the ESD protection device that supports high frequency signals (above 2000 MHz)
- D2: TVS diode, choose the TVS diode with appropriate clamping specification according to the requirement of feed voltage and antenna voltage

### 3.3 Power-on and Power-off

#### VCC

- The VCC initial level when power-on should be less than 0.4 V.
- The VCC ramp when power-on should be monotonic, without plateaus.
- The voltages of undershoot and ringing should be within 5% VCC.
- VCC power-on waveform: The time interval from 10% rising to 90% must be within 100 µs to 10 ms.
- Power-on time interval: The time interval between the power-off (VCC < 0.4 V) to the next power-on must be larger than 500 ms.

#### **V\_BCKP**

- The V\_BCKP initial level when power-on should be less than 0.4 V.
- The V\_BCKP ramp when power-on should be monotonic, without plateaus.
- The voltages of undershoot and ringing should be within 5% V\_BCKP.
- V\_BCKP power-on waveform: The time interval from 10% rising to 90% must be within 100  $\mu$ s to 10 ms.
- Power-on time interval: The time interval between the power-off (V\_BCKP < 0.4 V) to the next power-on must be larger than 500 ms.

## 3.4 Grounding and Heat Dissipation

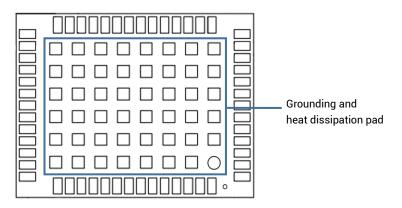

Figure 3-3 Grounding and Heat Dissipation Pad

The 48 pads in the rectangle in **Figure 3-3** are for grounding and heat dissipation. In the PCB design, it is recommended to connect them to a large sized ground to strengthen the heat dissipation.

### 3.5 Recommended Footprint on the PCB

The dimensions of UM670A-03's footprint on the PCB is recommended to be the same as that of the module's pads, as shown in **Figure 3-4 Recommended Footprint**. For more information about the module's dimensions, see **2.3 Dimensions**.

- For the convenience of hardware testing and debugging, proper test points can be added for the functional pins of the module.
- The dimensions of PCB pads can be optimized according to the specific production process to ensure manufacturability and reliability.

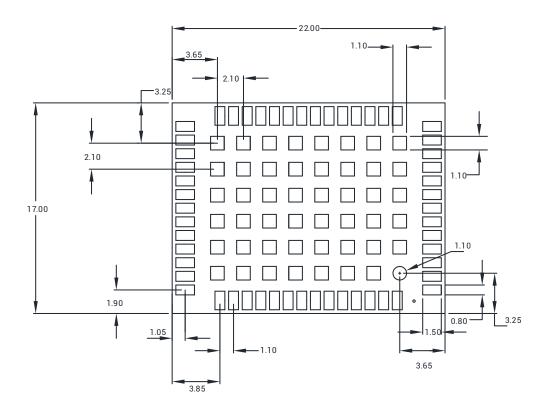

Figure 3-4 Recommended Footprint (Unit: mm)

## **4 Production Requirements**

### 4.1 Clean

Do NOT use alcohol or other organic solvents to clean the module, or it may lead to flux residues entering into the shielding shell, causing mildew and other problems.

### 4.2 Soldering

Recommended soldering temperature curve is as follows:

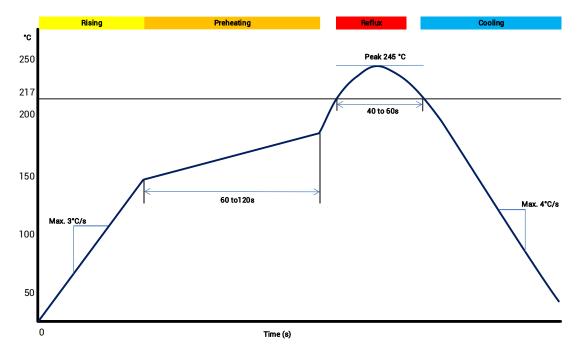

Figure 4-1 Soldering Temperature (Lead-free)

#### **Temperature Rising Stage**

Rising slope: Max. 3 °C/s

Rising temperature range: 50 °C to 150 °C

### **Preheating Stage**

Preheating time: 60 s to 120 s

Preheating temperature range: 150 °C to 180 °C

#### **Reflux Stage**

• Over melting temperature (217 °C) time: 40 s to 60 s

Peak temperature for soldering: no higher than 245 °C

#### **Cooling Stage**

Cooling slope: Max. 4 °C/s

In order to prevent falling off during soldering of the module, do not solder it on the back of the board during design, that is, better not go through soldering cycle twice.

The setting of soldering temperature depends on many factors of the factory, such as board type, solder paste type, solder paste thickness, etc. Please also refer to the relevant IPC standards and indicators of solder paste.

#### 4.3 Stencil

The apertures in the stencil need to meet the customer's own design requirements and inspection specifications. The thickness of the stencil is recommended to be 0.15 mm (not less than 0.12 mm).

The design of the stencil can be optimized according to the specific production process to ensure manufacturability and reliability.

## 5 Packaging

## 5.1 Label Description

Figure 5-1 Label Description

### 5.2 Ordering Information

Product Model	Sub-model	Description
		Automotive grade; dual-frequency single point positioning module; L1+L5
UM670A	03	operating temperature: -40 °C to +105 °C; supporting firmware upgrade;
		22 mm x 17 mm; 250 pieces/reel

### 5.3 Product Packaging

The UM670A-03 module uses carrier tape and reel (suitable for mainstream surface mount devices), packaged in vacuum-sealed aluminum foil antistatic bags, with a desiccant inside to prevent moisture. When using reflow soldering process to solder modules, please strictly comply with IPC standard to conduct humidity control. As packaging materials such as the carrier tape can only withstand the temperature of 55 °C, modules shall be removed from the package during baking.

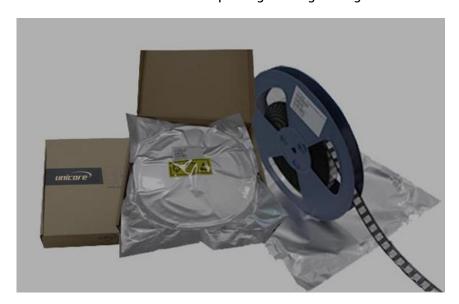

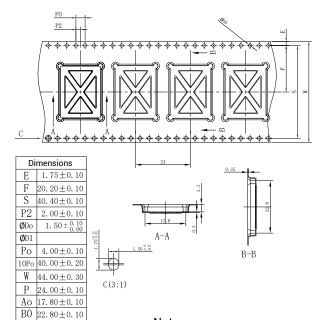

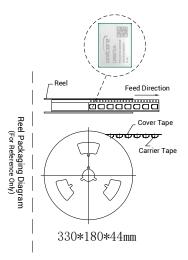

Figure 5-2 UM670A-03 Package

#### Note:

- 1. The cumulative tolerance of 10 side holes should not exceed  $\pm$  0.2 mm.
- 2. Material of the tape: Black antistatic PS (surface impedance 10<sup>5</sup>-10<sup>11</sup>) (surface static voltage <100 V), thickness: 0.35 mm.
- 3. Total length of the 13-inch reel package: 6.816 m (Length of the first part of empty packets: 0.408 m, length of packets containing modules: 6 m, length of the last part of empty packets: 0.408 m).
- 4. Total number of packets in the 13-inch reel package: 284 (Number of the first part of empty packets: 17; actual number of modules in the packets: 250; number of the last part of empty packets: 17).
- 5. All dimension designs are in accordance with EIA-481-C-2003.
- 6. The maximum bending degree of the carrier tape within the length of 250 mm should not exceed 1 mm (see the figure below).

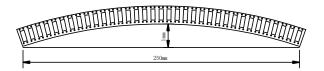

Figure 5-3 UM670A-03 Reel Package Diagram

Table 5-1 Package Description

KO 3.30±0.10

 $0.35 \pm 0.05$ 

Item	Description
Module Number	250 pieces/reel
Reel Size	Tray: 13"
	External diameter: 330 ± 2 mm
	Internal diameter: 180 ± 2 mm
	Width: 44.5 ± 0.5 mm
	Thickness: 2.0 ± 0.2 mm
Carrier Tape	Space between (center-to-center distance): 24 mm

Before surface mounting, make sure that the color of the 30% circle on the HUMIDITY INDICATOR is blue (see Figure 5-4). If the color of the 20% circle is pink and the color of the 30% circle is lavender (see Figure 5-5), you must bake the module until it turns to blue. The UM670A-03 is rated at MSL level 3. Refer to the relevant IPC/JEDEC J-STD-033 standards for the package and operation requirements. Users may access to the website www.jedec.org to get more information.

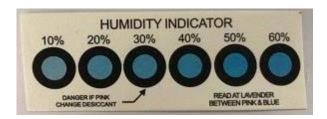

Figure 5-4 Normal Humidity Indication

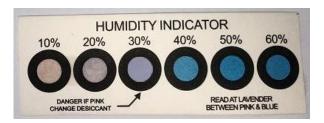

Figure 5-5 Abnormal Humidity Indication

The shelf life of the UM670A-03 module packaged in vacuum-sealed aluminum foil antistatic bags is one year.
